

# Installation Instructions for Rebounder Frame Cover

\*\*Though it is not necessary, installation of this product is easier when using a small piece of ribbon or cording to create a pull tab to wrap around the elastic cord as you install the cover over each leg opening. Be sure to remove this piece when finished with installation.

**1)** Find openings at 6 locations on outside edge of frame cover. Openings will line up with each leg on trampoline.

**2)** If any legs are installed on trampoline, remove them all. Then wrap frame cover around trampoline frame. At opening, stretch bungee over socket of trampoline.

**4)** Repeat Steps 1 – 3 at all remaining legs. **When finished, your frame cover is complete!** Photograph shows an installed Frame Cover with Foam. The Frame Cover without foam looks slightly different but installs the same way.

**3)** Install leg to leg socket, as shown in your trampoline manual.  
**IMPORTANT:** Be sure pad cover and bungee are not getting pinched between leg and socket.
