# JumpSport®

Safety Panel Installation Instructions

Safety Panel

- Secure one end of panel to leg and rail at top.

- Connect the top of the panel to frame around the perimeter of the trampoline, and secure the opposite end to the leg.

- Stake bottom of panel to ground between each leg. The 9th stake is used in the corner where the net ends.

- If your trampoline is smaller than 14ft, continue the secure panel to top of frame, creating an overlapping section. Make sure the outer corner is staked to the ground.
