

# Installation Instructions for Rebounder Spring Cover

**1)** Find pull-tabs attached at 6 locations on outside edge of spring cover. Pull-tabs will line up with each leg on trampoline.

**2)** If any legs are installed on trampoline, remove them all. Then wrap spring cover around trampoline frame. Use pull-tab to stretch bungee over socket of trampoline.

**3)** Install leg to leg socket, as shown in your trampoline manual. **IMPORTANT:** Be sure pad cover and bungee are not getting pinched between leg and socket.

**4)** Repeat Steps 1–3 at all remaining legs. **When finished, your spring cover is complete!**
