Assembly and Installation Instructions

Thank you for purchasing a JumpSport Universal Frame Pad!

The following pages contain diagrams, pictures, and written instructions for installing your Universal Frame Pad.

Before performing any Step, completely read the entire Step first.

Trampoline use is not recommended without the frame pad installed (see Picture A, below). The frame pad is designed to reduce the possibility of injury by protecting the user from coming into contact with the frame and springs of the trampoline. It is very important that you properly and securely attach the frame pad to the frame, and that it is in the correct position prior to using the trampoline.

Parts List

Your JumpSport Universal Frame Pad comes with a 1 piece frame pad and 8 pad bungees.

Assembly and Installation Instructions

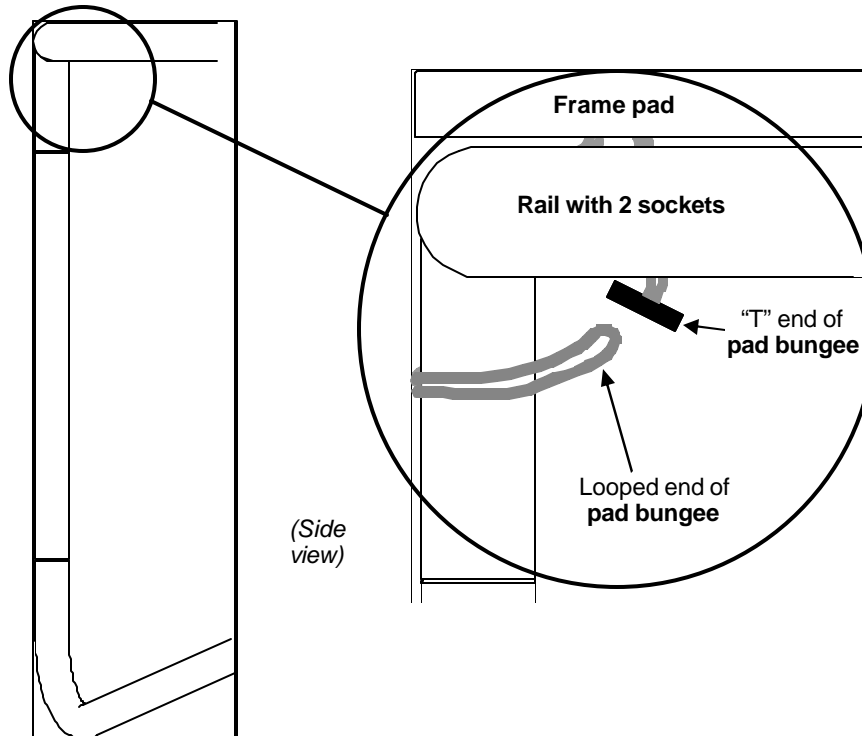

1) Lay frame pad on trampoline. Align pad so that slits on outside edge of pad skirt, line up over each leg of trampoline. If they do not line up, rotate pad to an adjacent leg.

2) Install pad bungees through the 2 grommets near edge of pad, as shown. Grommets should be on bottom side of pad.

Lift frame pad and remove spring closest to spring loop on bottom of pad. Slide spring through loop, then reconnect spring to trampoline. Continue to remove and reinstall a spring through every loop on bottom of pad, working clockwise. Have someone work across from you, also going clockwise.

Assembly and Installation Instructions

- 3)** Wrap looped end of pad bungee (located on bottom side of frame pad) around leg of trampoline. Then wrap looped end around the "T" on the opposite end of the bungee.

Your Universal Frame Pad is now installed!

To remove the frame pad, follow the Installation Instructions in reverse order.
